

Pro4ia's professional, industry-recognized **Infrastructure Services** division is a full service communications design, implementation, and support provider.

From the initial assessment & design through implementation and close-out, our professional team of BICSI[®] certified Registered Communications Distribution Designers (RCDD) and PMI[®] certified Project Management Professionals (PMP) collaborate with your staff & project team to create, manage, and implement the right information transport system (ITS) solution for your organization. Pro4ia provides design solutions for horizontal & backbone distribution systems, telecommunication spaces, as well as mission critical facilities such as Datacenters, Trading Floors, Call Centers, Equipment Rooms, and Disaster Recovery Sites. Pro4ia's Five-Step Project Path methodology guides the design and implementation process from concept to completion. Pro4ia also provides maintenance support to assist with "Day Two" administration of your organizations information transport systems.

Cable Plant Design Solutions:

Pro4ia provides a coordinated, comprehensive design package based on detailed analysis of your organizations current & future requirements. Following a thorough interview and examination process, Pro4ia designs a complete information transport system that provides maximum flexibility, reliability and redundancy.

Cable Plant RFP Solutions:

Pro4ia has created a streamlined cable plant RFP package that enables the prospective bidders to submit their bids in a condensed timeframe. The overall process enables Pro4ia to level received bids based on exact specifications and as a result does not allow for vendor interpretation which inevitably leads to scope creep and budget overages.

Site Evaluation & Selection:

Pro4ia can assist with the site evaluation and selection process which will enable your company to make an informed decision. We perform comprehensive studies of the core infrastructure offerings of each facility to ensure compliance with client technology specifications, cost, schedule and projected growth plans. Pro4ia makes recommendations based on industry-recognized tier classifications and key industry indicators.

Implementation & Quality Management:

Pro4ia provides on site implementation and quality management throughout the lifecycle of your project. We liaise with the client, architect, engineer, and all project stakeholders to make certain that critical milestones are met. Utilizing our quality control and cable management databases, our experienced team of consultants ensures that the technology design is implemented according to specification.

Datacenter Design Solutions:

The Datacenter is the core of an organization's IT infrastructure and is an integral part of any technology strategy. Pro4ia can assist your organization in the design of a resilient and scalable Datacenter which can provide maximum sustainability through fault tolerant systems and processes.

Infrastructure Documentation Services (IDS):

Pro4ia's IDS Program was developed to address the most common physical infrastructure issues facing Information Technology and Facilities Managers today - outdated and disparate information. Pro4ia's IDS Program can assist your organization by providing a detailed, TIA 606A compliant, Current State Assessment of your total communications infrastructure.
